

Corner Protectors

Corner protectors are solid board reinforcements placed on pallet corners to protect goods from crushing, impacts, or deformation. They maintain load integrity and reduce damage during transport and handling.

Key Advantages

- Reduce edge and corner damage during transport
- Enhance pallet stability and stacking strength
 - Cost-effective protection for high-volume distribution

Performance Characteristics

- Provides rigid structural support for pallet corners
- Prevents crushing, denting & edge deformation
 - Improves load stability throughout storage, handling & transit

Typical Applications

- Furniture & flat-pack goods
- Food & beverage distribution
- Any palletised load requiring rigid corner reinforcement
